

## MANAGEMENT'S REPORT

### To the Shareholders of Gear Energy Ltd.

#### *Management's Responsibility on Financial Statements*

Management is responsible for the preparation of Gear Energy Ltd.'s annual financial statements. The financial statements have been prepared in accordance with the accounting policies detailed in the notes thereto. In Management's opinion, the financial statements are in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board and include certain estimates that reflect Management's best judgments.

Management is responsible for the integrity of the financial statements. Management has developed and maintains an adequate system of internal control over financial reporting which provides reasonable assurance that all transactions are recorded, that the financial statements realistically report the Company's operating and financial results, and that the Company's assets are safeguarded from loss or unauthorized use. Management believes that this system of internal controls has operated effectively for the year ended December 31, 2015. The Company has effective disclosure controls and procedures to ensure timely and accurate disclosure of material information relating to the Company which complies with the requirements of Canadian securities legislation.

The Board of Directors has approved the information contained in the financial statements. Its financial statement related responsibilities are fulfilled mainly through the Audit Committee which is composed entirely of independent directors, and includes at least one director with financial expertise. The Audit Committee meets regularly with management and the external auditors to discuss reporting issues and ensures each party is properly discharging its responsibilities. The Audit Committee also considers the independence of the external auditors and reviews their fees.

The financial statements have been audited by Deloitte LLP, Chartered Professional Accountants, Chartered Accountants in accordance with Canadian generally accepted auditing standards, on behalf of the shareholders.

## INDEPENDENT AUDITOR'S REPORT

To the Shareholders of Gear Energy Ltd.:

We have audited the accompanying financial statements of Gear Energy Ltd., which comprise the balance sheets as at December 31, 2015 and 2014, and the statements of loss and comprehensive loss, statements of changes in shareholders' equity and statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

### *Management's Responsibility for the Financial Statements*

Management is responsible for the preparation and fair presentation of these financial statements in accordance with International Financial Reporting Standards, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

### *Auditor's Responsibility*

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

### *Opinion*

In our opinion, the financial statements present fairly, in all material respects, the financial position of Gear Energy Ltd. as at December 31, 2015 and 2014, and its financial performance and its cash flows for the years then ended in accordance with International Financial Reporting Standards.

**GEAR ENERGY LTD.**  
**NOTES TO THE FINANCIAL STATEMENTS**

December 31, 2015 and 2014

(all tabular amounts in Cdn\$ thousands, except per share amounts)

**1. STRUCTURE OF THE BUSINESS**

The principal undertakings of Gear Energy Ltd. (the “Company” or “Gear”) are to carry on the business of acquiring, developing and holding interests in petroleum and natural gas properties and assets.

Gear was incorporated in Canada and its principal place of business is located at 2600, 500 – 4<sup>th</sup> Avenue SW, Calgary, Alberta T2P 2V6.

**2. BASIS OF PREPARATION**

These financial statements (the “financial statements”) have been prepared under International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”) and were prepared using accounting policies consistent with IFRS.

A summary of Gear’s significant accounting policies under IFRS is presented in Note 3. The financial statements have been prepared on the historical cost basis with the exception of risk management contracts, which are measured at fair value.

The financial statements were authorized for issue by the Board of Directors on February 17, 2016.

**3. SIGNIFICANT ACCOUNTING POLICIES**

(a) Revenue recognition

Revenue associated with the sale of crude oil, natural gas, and natural gas liquids (“NGLs”) owned by Gear is recognized when title is transferred from Gear to its customers. Revenue is measured at the fair value of the consideration received or receivable. Revenue from the sale of crude oil, natural gas, and NGLs (prior to deduction of transportation costs) is recognized when all of the following conditions have been satisfied:

- Gear has transferred the significant risks and rewards of ownership of the goods to the buyer;
- Gear retains no continuing managerial involvement to the degree usually associated with ownership or effective control over the goods sold;
- the amount of revenue can be measured reliably;
- it is probable that the economic benefits associated with the transaction will flow to Gear; and
- the costs incurred or to be incurred in respect of the transaction can be measured reliably.

(b) Joint arrangements

Gear does not have any joint venture arrangements. However, Gear conducts a portion of its activities through jointly controlled operations. These financial statements reflect only the Company’s proportionate interest in such activities. Joint control exists for contractual arrangements governing Gear’s assets whereby Gear has less than 100 per cent working interest, all of the partners have control of the arrangement collectively, and spending on the project requires unanimous consent of all parties that collectively control the arrangement and share the associated risks.

(c) Share-based compensation

The Company accounts for its share-based compensation plan using the fair value method estimated using the Black-Scholes model. Under this method, a compensation expense is charged over the vesting period for stock options granted using the graded vesting method with a corresponding increase to contributed surplus. Upon exercise of the stock options, consideration paid, together with the amount previously recognized in contributed surplus is recorded as an increase to share capital. Forfeitures of stock options are estimated on the grant date and are adjusted to reflect the actual number of options that vest.

(d) Crude oil inventory

Crude oil inventory consists of amounts produced and in storage tanks and is recorded at the lower of cost, determined on a weighted-average basis, and net realizable value. Cost components include royalties, operating costs (other than transportation), and an estimated capital component based on depletion rates. Net realizable value is the estimated selling price in the normal course of business less applicable selling expenses.

(e) Exploration and Evaluation Assets ("E&E")

Costs incurred prior to acquiring the legal right to explore an area are charged directly to net income (loss). Costs incurred after the legal right to explore is obtained but before technical feasibility and commercial viability of the area has been established are capitalized as E&E assets. These costs generally include unproved property acquisition costs, geological and geophysical costs, sampling and appraisals, drilling and completion costs and directly attributable internal costs.

Once an area is determined to be technically feasible and commercially viable the accumulated costs are tested for impairment. The carrying value, net of any impairment, is then reclassified to property, plant and equipment as a developed and producing asset. If an area is determined not to be technically feasible and commercially viable, or the Company discontinues its exploration and evaluation activity, any unrecoverable costs are charged to net income (loss).

(f) Property, plant and equipment ("PP&E")

Items of PP&E, which include oil and gas Developed and Producing (D&P) assets and administrative assets, are measured at cost less accumulated depletion, depreciation and accumulated impairment losses.

Gains and losses on disposals of properties are determined by comparing the proceeds to the net carrying value of the property and are recognized in the statement of loss and comprehensive loss.

(g) Depletion and Depreciation

D&P assets are componentized into groups of assets with similar useful lives for the purposes of performing depletion calculations. Depletion expense is calculated on the unit-of-production basis based on:

- (i) total estimated proved and probable reserves calculated in accordance with National Instrument 51-101, Standards of Disclosure for Oil and Gas Activities;
- (ii) total capitalized costs plus estimated future development costs of proved and probable reserves, including future estimated asset retirement costs; and
- (iii) relative volumes of petroleum and natural gas reserves and production, before royalties, converted at the energy equivalent conversion ratio of six thousand cubic feet of natural gas to one barrel of oil.

E&E assets are not depleted.

Administrative assets are depreciated using the declining balance method over the useful lives of the assets.

(h) Impairment

D&P Assets

D&P assets are aggregated into cash-generating units (CGUs) for the purposes of impairment testing and depletion calculations. CGUs are groups of assets that generate independent cash inflows and are generally defined based on geographic areas, with consideration given to how the assets are managed.

D&P assets are reviewed for impairment at a CGU level when indicators of impairment exist. When indicators of impairment exist, the carrying value of each CGU is compared to its recoverable amount which is defined as the higher of its fair value less cost to sell or its value in use.

When the carrying value exceeds the recoverable amount an impairment loss exists and is recognized in the statement of loss and comprehensive loss.

Reversals of impairments are recognized when events or circumstances that triggered the original impairment have changed. Impairments can only be reversed in future periods up to the carrying amount that would have been determined, net of depletion and depreciation, had no impairment losses been previously recognized.

E&E and Administrative Assets

E&E and administrative assets are assessed for impairment at the operating segment level. Impairment tests are carried out when E&E assets are transferred to D&P assets following the declaration of commercial reserves, and any time that circumstances arise which could indicate a potential impairment. An impairment is recognized if the total carrying values of E&E assets and administrative assets exceed the aggregate impairment cushions calculated for Gear's CGU's and is applied to reduce the carrying amount of E&E and administrative assets on a pro-rata basis.

If E&E and administrative assets are subject to impairment testing in the same period in which there is an indication of impairment in one of Gear's CGU's, that CGU is first tested for impairment and any resulting impairment loss is recorded prior to conducting impairment tests on assets at the operating segment level.

(i) Financial Instruments

- (i) Non-derivative financial instruments

All financial instruments are initially recognized at fair value on the balance sheet.

Accounts receivable are classified as loans and receivables and accounts payable and accrued liabilities and debt are classified as other liabilities. These classifications are initially measured at fair value. Subsequent revaluations are recorded at amortized cost using the effective interest method.

The carrying value approximates fair value due to the short term nature of these instruments.

In addition, debentures are recognized initially at fair value and are subsequently measured at amortized cost using the effective interest method. The debentures are carried net of issue costs with the issue costs amortized to net income or loss using the effective interest method.

(ii) Risk Management Contracts

Gear enters into risk management contracts in order to manage its exposure to market risks from fluctuations in commodity prices, foreign exchange rates and interest rates in the normal course of operations. Gear has not designated its risk management contracts as effective hedges, and thus has not applied hedge accounting, even though it considers most of these contracts to be economic hedges. As a result, all risk management contracts are classified as fair value through profit or loss and are recorded at fair value on the balance sheet with changes in fair value recorded in the statement of loss and comprehensive loss. The fair values of these derivative instruments are generally based on an estimate of the amounts that would be paid or received to settle these instruments at the balance sheet date.

(j) Decommissioning Liabilities

Gear's oil and gas operating activities give rise to dismantling, decommissioning and site remediation activities. Gear recognizes a liability for the estimated present value of the future decommissioning liabilities at each balance sheet date using a risk free discount rate. The associated decommissioning cost is capitalized and amortized over the same period as the underlying asset. Changes in the estimated liability resulting from revisions to estimated timing, amount of cash flows, or changes in the discount rate are recognized as a change in the decommissioning liability and related capitalized decommissioning cost.

Amortization of capitalized decommissioning costs is included in depreciation, depletion and amortization in net loss. Increases in decommissioning liabilities resulting from the passage of time are recorded as accretion. Actual expenditures incurred are charged against the decommissioning liability.

(k) Deferred income taxes

Deferred tax is recognized using the balance sheet method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the reporting dates.

Deferred tax is recognized in the statement of loss and comprehensive loss except to the extent that it relates to items recognized directly in equity, in which case it is recognized in equity. Deferred tax assets are only recognized for temporary differences, unused tax losses and unused tax credits if it is probable that future tax amounts will arise to utilize those amounts.

Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset, and they relate to income taxes levied by the same tax authority on the same taxable entity, or on different tax entities, but they intend to settle current tax liabilities and assets on a net basis or their tax assets and liabilities will be realized simultaneously.

(l) Per Share Amounts

Basic per share amounts are computed by dividing net income or loss by the weighted average number of common shares outstanding during the period. Diluted per share amounts reflect the potential dilution that would occur if dilutive instruments were exercised and common shares issued.

(m) Future Accounting Policies Changes

In May 2014, the IASB issued IFRS 15 *Revenue from Contracts with Customers*, which replaces International Accounting Standard ("IAS") 18 *Revenue*, IAS 11 *Construction Contracts*, and related interpretations. The standard is required to be adopted either retrospectively or using a modified transition approach for fiscal years beginning on or after January 1, 2018, with earlier adoption permitted. IFRS 15 will be applied by Gear on January 1, 2018 and the Company is currently evaluating the impact of the standard on Gear's financial statements.

In July 2014, the IASB completed the final elements of IFRS 9 *Financial Instruments*. The standard supersedes earlier versions of IFRS 9 and completes the IASB's project to replace IAS 39 *Financial Instruments: Recognition and Measurement*. IFRS 9, as amended, includes a principle-based approach for classification and

measurement of financial assets, a single 'expected loss' impairment model and a substantially-reformed approach to hedge accounting. The standard will come into effect for annual periods beginning on or after January 1, 2018, with earlier adoption permitted. IFRS 9 will be applied on a retrospective basis by Gear on January 1, 2018 and the Company is currently evaluating the impact of the standard on Gear's financial statements.

In January 2016, the IASB issued IFRS 16 *Leases*, which replaces IAS 17 *Leases*. For lessees applying IFRS 16, a single recognition and measurement model for leases would apply, with required recognition of assets and liabilities for most leases. The standard will come into effect for annual periods beginning on or after January 1, 2019, with earlier adoption permitted if the entity is also applying IFRS 15 *Revenue from Contracts with Customers*. IFRS 16 will be applied by Gear on January 1, 2019 and the Company is currently evaluating the impact of the standard on Gear's financial statements.

#### 4. MANAGEMENT JUDGMENTS AND ESTIMATION UNCERTAINTY

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingencies at the date of the financial statements, and revenues and expenses during the reporting year. Actual results could differ from those estimated. The key sources of estimation uncertainty that have a significant risk of causing material adjustment to the carrying amounts of assets and liabilities are discussed below.

##### **Recoverability of asset carrying values**

The recoverability of D&P asset carrying values is assessed at the CGU level. Determination of what constitutes a CGU is subject to management judgments. The asset composition of a CGU can directly impact the recoverability of the assets included therein. In assessing the recoverability of oil and gas properties, each CGU's carrying value is compared to its recoverable amount, defined as the greater of its fair value less cost to sell and value in use. Management has determined that Gear's asset base represents a single CGU supported by the fact that Gear's properties are predominantly heavy oil properties in close proximity to each other, with similar cost structures and marketing arrangements.

At December 31, 2015 and 2014 the recoverable amount of Gear's CGU was estimated as fair value less cost to sell based on the following information:

- i) the net present value of the after-tax cash flows from oil and gas reserves of the CGU based on reserves estimated by Gear's independent reserve evaluator;
- ii) the fair value of Gear's undeveloped land of 38,525 net undeveloped hectares based on internal estimates using recent land transactions as a proxy leading to a value of approximately \$230 per hectare;
- iii) the fair value of Gear's proprietary seismic data based on internal estimates using recent transactions as a proxy; and
- iv) a cost to sell on the above three items at a reasonable industry average.

Consideration was also given to acquisition metrics of recent transactions completed on similar assets to those contained within the CGU.

Key input estimates used in the determination of cash flows from oil and gas reserves include the following:

- i) Reserves. Assumptions that are valid at the time of reserve estimation may change significantly when new information becomes available. Changes in forward price estimates, production costs or recovery rates may change the economic status of reserves and may ultimately result in reserves being restated.
- ii) Oil and natural gas prices. Forward price estimates of the oil and natural gas prices are used in the cash flow model. Commodity prices have fluctuated widely in recent years due to global and regional factors including supply and demand fundamentals, inventory levels, exchange rates, weather, economic and geopolitical factors.
- iii) Discount rate. The discount rate used to calculate the net present value of cash flows is based on estimates of an approximate industry peer group weighted average cost of capital. Changes in the general economic environment could result in significant changes to this estimate.

As a result of declining commodity prices for crude oil, an impairment test was carried out at December 31, 2015 on Gear's CGU and administrative assets. The estimated recoverable amounts were based on fair value less costs of disposal calculations using a discount rate determined based on an estimated industry weighted cost of capital, and the following forward commodity price estimates:

Year	Western Canadian Select Oil (CAD\$/bbl)	AECO Gas (Cdn\$/mmbtu)	Cdn\$/US\$ Exchange Rates
2016	42.26	2.76	1.379
2017	51.20	3.27	1.333
2018	55.39	3.45	1.290
2019	60.84	3.63	1.250
2020	66.18	3.81	1.212
2021	70.00	3.90	1.176
2022	75.88	4.10	1.176
2023	81.41	4.30	1.176
2024	84.90	4.50	1.176
2025	86.60	4.60	1.176
Remainder <sup>(1)</sup>	2.0%	2.0%	1.176

(1) Percentage change represents the change in each subsequent year to the end of the reserve life.

For the year ended December 31, 2015, Gear recorded an impairment of \$92.7 million (2014 – \$48.8 million) on its one existing CGU, which was recognized in impairment in the statement of loss. The recoverable amount of \$178.1 million (2014 – \$320.2 million) was determined using a discount rate of 15 per cent before tax (2014 – 12 per cent).

The fair value less cost to sell value used to determine the recoverable amount of the impaired PP&E are classified as Level 2 fair value measurements. Refer to Note 15 for information on fair value hierarchy classifications.

#### Depletion of oil and gas assets

Depletion of oil and gas assets is determined based on total proved and probable reserve values as well as future development costs as estimated by Gear's external reserve evaluator. See (i) above for discussion of estimates and judgments involved in reserve estimation.

#### Decommissioning liability

The provision for abandonment and reclamation is based on current legal and constructive requirements, technology, price levels and expected plans for remediation. Actual costs and cash outflows can differ from estimates because of changes in laws and regulations, public expectations, market conditions, discovery and analysis of site conditions and changes in technology.

#### Derivative Instruments

The estimated fair value of derivative instruments resulting in financial assets and liabilities is reliant upon forward commodity prices. Any change in the forward commodity price curves could result in a change to the estimated valuation of the instrument.

#### Employee Compensation Costs

Compensation expense recorded for Gear's stock option plan is based on a Black-Scholes pricing model. The inputs to this model such as average expected volatility and estimated forfeiture rates rely on management judgment.

#### Accrual Estimates

Revenue, royalty, operating expense and capital amounts are estimated at each reporting date, before actual results are known. These estimates rely on management judgment and could vary from actual results.

## 5. INVENTORY

At December 31, 2015 Gear recorded oil inventory valued at its market price of \$3.4 million. The cost components of the inventory balance are as follows:

(\$ thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Capital	-	199
Operating	3,440	6,611
Balance, end of year	3,440	6,810

At December 31, 2015, Gear recognized an impairment on its inventory balance in the amount of \$4.0 million (2014 - \$5.0 million) as a result of a reduction in the net realizable value.

## 6. ACQUISITIONS AND DISPOSITIONS

On April 30, 2014 Gear completed an acquisition of heavy oil assets (the "Assets") for total proceeds of \$82.4 million, paid in cash. The acquired Assets are focused near Gear's core producing areas of East Central Alberta and West Central Saskatchewan. The Assets fit Gear's strategy of targeting underexploited, geographically focused production with low risk development locations.

This transaction has been accounted for as a business combination using the acquisition method whereby the assets acquired and the liabilities assumed are recorded at fair value. The following table summarizes the net assets acquired pursuant to the acquisition:

Net Assets Acquired (\$ thousands)		Amount
Property, plant and equipment	\$	91,159
Inventory		2,721
Prepaid expenses		1,035
Accounts payable		(475)
Decommissioning liability		(12,613)
Total net assets acquired		81,827

  

Consideration (\$ thousands)		Amount
Cash	\$	81,827

These financial statements incorporate the results of operations of the acquired heavy oil properties from April 30, 2014. The assets generated sales of crude oil, natural gas and natural gas liquids of \$37.9 million and \$13.8 million of net income from April 30, 2014 to December 31, 2014. Had the acquisition occurred on January 1, 2014, Gear estimates that its sales of crude oil, natural gas and natural gas liquids and net income for year ended December 31, 2014 would have incrementally increased by approximately \$21.1 million and \$7.5 million, respectively.

In 2015 Gear recorded a purchase price reduction of \$553 thousand relating to the above acquisition with proceeds received during the year. In addition, Gear completed minor net dispositions throughout 2015 totaling \$0.2 million (2014 - \$0.8 million net acquisitions).

## 7. EXPLORATION AND EVALUATION ASSETS

Cost (\$ thousands)		E&E Assets
Balance, December 31, 2013	\$	3,284
Exploration expense		(3,284)
Balance, December 31, 2014	\$	-

Exploration and evaluation assets consist of the Company's exploration projects which are pending economic production. During the year ended December 31, 2014 exploration expense of \$3.3 million was recognized.

Gear's E&E assets consisted of a single gas property located in northern British Columbia, apart from Gear's existing producing assets. Management's assessment of this property considered geographic location, the low commodity price environment and existing land tenure. This assessment resulted in the conclusion that the likelihood of development was negligible and accordingly, the carrying value of the property was expensed.

## 8. PROPERTY, PLANT AND EQUIPMENT

The following table reconciles Gear's property, plant and equipment:

<b>Cost</b> (\$ thousands)	<b>D&amp;P Assets</b>	<b>Administrative Assets</b>	<b>Total</b>
Balance, December 31, 2013	350,900	303	351,203
Additions	84,465	115	84,580
Acquisitions	93,640	-	93,640
Disposals	(681)	-	(681)
Change in decommissioning costs	27,627	-	27,627
Balance, December 31, 2014	555,951	418	556,369
Additions	14,099	784	14,883
Acquisitions	(458)	-	(458)
Disposals	(227)	-	(227)
Change in decommissioning costs	(19,240)	-	(19,240)
Balance, December 31, 2015	550,125	1,202	551,327
<b>Depletion, depreciation and amortization</b>			
Balance, December 31, 2013	136,358	204	136,562
Depletion, depreciation, amortization	50,589	75	50,664
Impairment	48,800	-	48,800
Balance, December 31, 2014	235,747	279	236,026
Depletion, depreciation and amortization	43,536	160	43,696
Impairment	92,700	-	92,700
Balance, December 31, 2015	371,983	439	372,422
<b>Carrying amounts</b> (\$ thousands)			
As at December 31, 2014	320,204	139	320,343
As at December 31, 2015	178,142	763	178,905

## 9. DEBT

As at December 31, 2015 Gear had syndicated demand facilities ("the Credit Facilities") with three banks with a borrowing limit on the Credit Facilities of \$60 million. The Credit Facilities bear interest at Canadian bank prime or, at Gear's option, Canadian bankers' acceptances, plus applicable margin and stamping fee. The total stamping fees range, depending on Gear's debt to cash flow ratio, between 50 bps to 250 bps on Canadian bank prime borrowings and between 175 bps and 375 bps on Canadian dollar bankers' acceptances. The undrawn portion of the Credit Facilities is subject to a standby fee in the range of 20 bps to 45 bps. The Credit Facilities carry a single covenant to maintain an adjusted working capital ratio of not less than 1.0:1. Adjusted working capital is defined as current assets less unrealized hedging gains, plus the undrawn portion of the credit facilities divided by accounts payable and accrued liabilities. At December 31, 2015 Gear was in compliance with this covenant. The Credit Facilities are secured by a fixed and floating charge on the assets of Gear and are subject to semi-annual reviews. The next scheduled review is to be complete by June 1, 2016.

As at December 31, 2015 Gear had \$55.7 million drawn (December 31, 2014 – \$98.9 million) and had no outstanding letters of credit (December 31, 2014 - \$0.7 million).

## 10. DEBENTURES

On November 30, 2015, the Company completed the issuance of unsecured subordinated debentures (the "Debentures") for gross proceeds of \$14.8 million. The Debentures have a maturity date of November 30, 2020 and carry a coupon of 4 per cent per annum payable semi-annually in arrears on May 31 and November 30 until maturity, commencing May 31, 2016. These Debentures carry an equity conversion feature which is subject to shareholder approval. Gear intends to seek shareholder approval for conversion of the Convertible Debentures prior to May 31, 2016 at its next Annual General Meeting. If shareholder approval is received, the Debentures will be convertible at the option of the holder at any time prior to the maturity date at a conversion price of \$0.87 per common share such that for every \$1,000 principal amount of Debentures a holder will receive approximately 1,149.43 common shares. Holders converting their Debentures will be entitled to receive accrued and unpaid interest thereon for the period from the date of the latest interest payment date to, but excluding, the date of conversion. If shareholder approval is not received prior to May 31, 2016 the annual interest rate on the Debentures will increase to 6.0 per cent per annum.

If shareholder approval on the conversion feature is received, the debentures may be redeemable on or after November 30, 2018 by Gear if the current market price of Gear's common shares is at least 125 per cent of the

conversion price. On or after November 30, 2019, the Debentures may be redeemed by Gear at a redemption price equal to the principal amount plus accrued and unpaid interest up to the date of redemption. If the shareholder approval on the conversion feature is received, Gear will have the option to satisfy its obligation to repay the principal amount of the Debentures due at maturity or redemption of the Debentures by the issuance of common shares with the number of such common shares based on 95% of the weighted average trading price of the common shares prior to the date of maturity or redemption.

A derivative financial instrument has been identified associated with the shareholder vote - an option exists for Gear's shareholders to approve the conversion feature. This option will expire on or before May 31, 2016 coincident with the shareholder vote. The instrument has been valued using a Monte Carlo valuation model to calculate various scenarios on how shareholders will vote based on the future probability of the intrinsic difference between the share price and the conversion price. As at the date of issuance the fair value of this conversion approval option was determined to be a \$1.8 million liability and has been recorded on the Balance Sheet. The fair value was derived using an 80 per cent probability that shareholders will vote to approve the conversion option. An increase in the probability of shareholders voting to approve the conversion option to 90 per cent results in an increase in the fair value of the liability to \$2.1 million. The host liability component of the Debenture has been measured as the residual value from deducting the fair value of the derivative liability from the transaction price. Issuance costs have been added to the carrying amount of the Debenture. The balance of the Debenture liability will be accreted to the principle amount at maturity through the effective interest rate method. Subsequent changes in the fair value of the conversion approval option are recorded in the Statement of loss and comprehensive loss.

The following tables reconcile the carrying amounts of the Debentures and the conversion approval option as at the date of issuance and provides a continuity of balances to December 31, 2015:

(\$ thousands)	Transaction price	Issuance costs	Carrying amount
Debentures	13,000	(810)	12,190
Conversion approval option	1,800	-	1,800
Balance, November 30, 2015	14,800	(810)	13,990

(\$ thousands)	Debentures	Conversion approval option
Balance, November 30, 2015	12,190	1,800
Accretion using effective interest rate at 8%	40	-
Change in fair value of conversion approval option	-	-
Balance, December 31, 2015	12,230	1,800

## 11. DECOMMISSIONING LIABILITY

(\$thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Balance, beginning of year	74,114	35,113
Changes in estimates	(19,653)	4,047
Additions	413	4,230
Dispositions	-	(56)
Liabilities acquired through acquisitions	-	12,613
Revaluation of acquired decommissioning liabilities (1)	-	19,350
Decommissioning liabilities settled	(1,383)	(2,636)
Accretion	1,468	1,453
Balance, end of year	54,959	74,114

(1) These amounts relate to the revaluation of acquired decommissioning liabilities at the end of the period using a risk-free discount rate. At the date of acquisition decommissioning liabilities are fair valued.

The undiscounted and unescalated amount of the expected cash flows required to settle the decommissioning liability is estimated to be \$55.3 million as at December 31, 2015 (December 31, 2014 - \$77.2 million). The liability for the expected cash flows, as reflected in the financial statements, has been inflated at two per cent and discounted using a risk free rate of 2.04 per cent (December 31, 2014 – 2.22 per cent). Abandonments are expected to occur between 2016 and 2035 and related costs will be funded mainly from Gear's cash provided by operating activities.

## 12. RISK MANAGEMENT CONTRACTS

Gear uses or plans to use a variety of derivative instruments to reduce its exposure to fluctuations in commodity prices, foreign exchange rates, and interest rates. Gear considers all of these present and future transactions to be effective economic hedges; however, Gear's current contracts do not, and contracts entered into in the future may not qualify as effective hedges for accounting purposes.

Following is a summary of all risk management contracts in place as at December 31, 2015:

Financial WTI Crude Oil Contracts								
Term	Contract	Currency	Volume	Sold Swap	Sold Call	Bought Put	Sold Put	
			bb/d	\$/bbl	\$/bbl	\$/bbl	\$/bbl	\$/bbl
Jan 1, 2016	Jun 30, 2016	Collar	250	-	87.25	65.00	-	-
Jan 1, 2016	Jun 30, 2016	Collar	250	-	82.50	65.00	-	-
Jan 1, 2016	Jun 30, 2016	Collar	230	-	67.65	57.00	-	-
Jan 1, 2016	Jun 30, 2016	Collar	270	-	67.50	57.00	-	-
Jan 1, 2016	Dec 31, 2016	Swap	1,000	66.00	-	-	-	-
Jan 1, 2016	Dec 31, 2016	Swap	500	68.00	-	-	-	-
Jul 1, 2016	Dec 31, 2016	Swap	500	68.50	-	-	-	-

As at December 31, 2015, the fair value associated with Gear's risk management contracts was an asset of \$9.2 million (\$13.7 million asset at December 31, 2014).

The following table reconciles the gain on risk management contracts:

(\$ thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Realized cash gain (loss) on risk management contracts	15,179	(2,167)
Change in unrealized fair value of risk management contracts	(4,517)	15,804
Total gain on risk management contracts	10,662	13,637

## 13. SHAREHOLDERS' EQUITY

Gear is authorized to issue an unlimited number of common shares and an unlimited number of preferred shares, issuable in series. Holders of common shares are entitled to dividends if declared by the Board, one vote per share, and upon liquidation, dissolution or winding up of the Company, the remaining property and assets of Gear. There are no outstanding preferred shares as at December 31, 2015 or 2014.

### a) Share Capital

(thousands of shares and \$ thousands)	Year ended December 31, 2015		Year ended December 31, 2014	
	Shares	Amount	Shares	Amount
Balance, beginning of year	70,817	\$ 231,067	53,956	\$ 166,869
Issued on offering of common shares	14,667	11,000	15,875	63,500
Exercise of stock options	-	-	986	3,346
Share issue costs, net of deferred tax benefit of \$197 (2014 - \$881)	-	(532)	-	(2,648)
Balance, end of year	85,484	\$ 241,535	70,817	\$ 231,067

**b) Stock Options**

Gear has a stock option plan under which employees, directors and consultants are eligible to receive grants. Under the plan, options may be granted to purchase up to 10% of the outstanding shares of Gear and the maximum term of options granted is five years. Unless otherwise determined by the Board of Directors at the time of grant, options vest as to one-third on each of the first, second and third anniversary dates of the date of grant. The following table summarizes Gear's stock option plan during the years ended December 31, 2015 and 2014.

(thousands)	Year ended December 31, 2015		Year ended December 31, 2014	
	Number of stock options	Weighted average exercise price	Number of stock options	Weighted average exercise price
Outstanding, beginning of year	4,794	\$ 3.54	4,310	\$ 2.52
Granted	2,608	1.53	1,820	5.23
Exercised	-	-	(986)	2.50
Expired	(663)	2.50	-	-
Forfeited	(359)	3.49	(350)	2.50
Outstanding, end of year	6,380	2.83	4,794	3.54
Exercisable, end of year	1,900	\$ 3.33	2,770	\$ 2.53

As at December 31, 2015 Gear had 6.4 million stock options outstanding at exercises prices ranging from \$0.60 to \$6.05 per share as summarized below:

Exercise Price	Number of stock options (thousands)	Weighted average remaining contractual life (years)
\$0.60 – \$2.00	2,582	4.5
\$2.01 – \$4.00	2,254	2.1
\$4.01 – \$6.05	1,544	3.5
	6,380	3.5

During 2015, Gear has recorded an expense of \$2,194 thousand (2014 - \$1,611 thousand) to share-based compensation expense recognizing the stock option activity for the period based on the fair value of options issued amortized using a graded vesting calculation.

The Black-Scholes option-pricing model was used to determine the fair value of stock options granted using the following assumptions:

	Year ended December 31,	
	2015	2014
Risk free interest rate (%)	0.90	1.03
Dividend yield (%)	-	-
Average expected life (years)	5.0	5.0
Average expected volatility (%)	60.9	41.3
Forfeiture rate (%)	10.0	10.0

**c) Weighted average common shares**

(thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Basic	72,103	66,706
Diluted	72,103	67,840

For the year ended December 31, 2015 6,380 thousand options were excluded from the weighted average number of common shares as they were anti-dilutive (year ended December 31, 2014 – 2,999 thousand options were dilutive with a dilution impact of 1,134 thousand shares).

## 14. INCOME TAXES

The tax provision differs from the amount computed by applying the combined Canadian federal and provincial statutory income tax rates to loss before deferred income tax expense as follows:

(\$ thousands)	December 31, 2015	December 31, 2014
Loss before income taxes	(106,064)	(16,089)
Canadian statutory rate <sup>(1)</sup>	27.0%	25.0%
Expected income tax recovery at statutory rates	(28,637)	(4,022)
Effect on income tax of:		
Effect of change in Canadian statutory rate	(1,286)	-
Change in estimated pool balances	431	541
Shared-based compensation	592	403
Tax assets not recognized <sup>(2)</sup>	19,200	-
Other	155	69
Deferred tax recovery	(9,545)	(3,009)

(1) The statutory rate consists of the combined statutory tax rate for Gear.

(2) Tax assets not recognized is based on current tax pools less future taxable income based on undiscounted reserve value estimates and deduction estimates such as general and administrative and interest and financing charges.

(\$ thousands)	December 31, 2015	December 31, 2014
Deferred tax assets		
Decommissioning liability	14,839	18,528
Non-capital losses carry forward	7,472	7,340
Financing fees	1,126	933
Recognized tax pools in excess of capital assets	5,283	-
Deferred tax liabilities		
Capital assets in excess of tax value	-	(6,877)
Risk management contracts	(2,477)	(3,423)
Deferred tax asset	26,243	16,501

(\$ thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Deferred tax asset, beginning of the year	16,501	12,611
Deferred tax recovery	9,545	3,009
Deferred tax asset recognized in share issue costs	197	881
Deferred tax asset, end of the year	26,243	16,501

All of Gear's assets have an approximate tax basis of \$302.1 million (\$325.9 million in 2014) available for future use as deductions from taxable income. Included in this tax basis are estimated non-capital loss carry forwards that expire in the years 2027 through 2030.

The following is a summary of the estimated Gear tax pools:

(\$ thousands)	December 31, 2015	December 31, 2014
Canadian oil and gas property expenses	120,566	132,846
Canadian development expenses	75,501	76,539
Canadian exploration expenses	21,632	18,113
Undepreciated capital cost	53,314	65,355
Non-capital losses	27,675	29,361
Other	3,441	3,730
Estimated tax pools, federal and provincial	302,129	325,944

## 15. FINANCIAL INSTRUMENTS

### Classification and Measurement

Gear's financial instruments on the balance sheet are carried at amortized cost with the exception of risk management contracts, which are carried at fair value. As at December 31, 2015 and 2014, no significant differences existed between the carrying value of financial instruments and their estimated fair values.

All of Gear's risk management contracts are transacted in active markets. Gear classifies the fair value of these transactions according to the following hierarchy based on the amount of observable inputs used to value the instrument.

- Level 1 – Quoted prices are available in active markets for identical assets or liabilities as of the reporting date. Active markets are those in which transactions occur in sufficient frequency and volume to provide pricing information on an ongoing basis.
- Level 2 – Pricing inputs are other than quoted prices in active markets included in Level 1. Prices in Level 2 are either directly or indirectly observable as of the reporting date. Level 2 valuations are based on inputs, including quoted forward prices for commodities, time value and volatility factors, which can be substantially observed or corroborated in the marketplace.
- Level 3 – Valuations in this level are those with inputs for the asset or liability that are not based on observable market data.

Gear's risk management contracts have been assessed on the fair value hierarchy described above. Gear's cash is classified as Level 1, risk management contracts as Level 2, and the conversion approval option as Level 3. Assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the placement within the fair value hierarchy level.

### Market Risk Management

Gear is exposed to a number of different financial risks arising from normal course business exposures, as well as the Company's use of financial instruments. These risk factors include market risks relating to commodity prices, foreign currency risk and interest rate risk, as well as liquidity risk and credit risk. There have been no changes in the Company's objectives, policies or risks surrounding financial instruments.

Market risk is the risk or uncertainty arising from possible market price movements and their impact on the future performance of the business. The market price movements that could adversely affect the value of the Company's financial assets, liabilities and expected future cash flows include commodity price risk (crude oil and natural gas), and foreign currency exchange risk.

#### (a) *Commodity price and foreign currency exchange risk*

Gear is subject to commodity price risk on the delivery of crude oil, and to a lesser extent, natural gas. These prices have a significant impact on its financial condition and can be subject to volatility as a result of a number of different external factors. North American crude oil and natural gas prices are based upon US dollar denominated commodity prices. As a result, the price received by Canadian producers is affected by the Canadian/US dollar exchange rate. Gear manages the risks associated with changes in commodity prices and foreign currency exchange by entering into a variety of risk management contracts (see Note 12).

The following table illustrates the effects of movement in commodity prices on net loss due to changes in the fair value of risk management contracts in place at December 31, 2015. The sensitivity is based on a 10 per cent increase and 10 per cent decrease in the price of WTI. The commodity price assumptions are based on management's assessment of reasonably possible changes in oil and natural gas prices that could occur in the future.

<b>Sensitivity of Commodity Price Risk management Contracts as at December 31, 2015</b>		
(\$ thousands)		
	<b>10% Decrease in WTI</b>	<b>10% Increase in WTI</b>
Net income increase (decrease)	917	(917)

The sensitivities are hypothetical and based on management's assessment of reasonably possible changes in commodity prices after the balance sheet date. The results of the sensitivity should not be considered to be predictive of future performance. Changes in the fair value of risk management contracts cannot generally be extrapolated because the relationship of change in certain variables to a change in fair value may not be linear.

#### (b) *Interest rate risk*

Gear has variable interest rates on its Credit Facilities, therefore, changes in interest rates could result in an increase or decrease in the amount Gear pays to service its debt. Gear had no risk management contracts that would be affected by interest rates in place at December 31, 2015.

If interest rates were to increase or decrease by one per cent, it is estimated that Gear's net income would change by approximately \$407 thousand for the year ended December 31, 2015 assuming that the debt outstanding under Gear's Credit Facilities at December 31, 2015 was outstanding for all of 2015.

#### (c) *Liquidity risk*

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities. The Company believes that it has access to sufficient capital through internally generated cash flows and external sources (bank credit markets and equity financing, if required) to meet current spending forecasts. However, access to these external sources may change at any time and are subject to numerous factors. All the accounts payable and accrued liabilities are due in less than one year and amounts outstanding on the Credit Facilities are due on demand. The debentures have a scheduled bullet repayment date of November 30, 2020.

(d) *Credit risk*

Gear is or may be exposed to third party credit risk through its contractual arrangements with its current or future joint venture partners, marketers of petroleum and natural gas and other parties. In the event such entities fail to meet their contractual obligations to Gear, such failures could have a material adverse effect. The Company manages the risk by reviewing the credit risk of these entities and by entering agreements only with parties that meet certain credit tests. The maximum credit risk that the Company is exposed to is the carrying value of cash and accounts receivable.

The majority of the credit exposure on accounts receivable at December 31, 2015 pertains to accrued revenue for December 2015 production volumes. Gear transacts with a number of oil and natural gas marketing companies. Marketing companies typically remit amounts to Gear by the 25<sup>th</sup> day of the month following production. A significant portion of Gear's accounts receivable is carried by two marketing companies with sound financial positioning. At December 31, 2015, 46 per cent and 31 per cent of total outstanding accounts receivable pertains to these companies. Gear did not have any other customers from which it had outstanding accounts receivable greater than 10 per cent of the total outstanding balance at December 31, 2015.

When determining whether amounts that are past due are collectable, management assesses the credit worthiness and past payment history of the counterparty, as well as the nature of the past due amount. Gear considers all amounts greater than 90 days to be past due. At December 31, 2015 management determined \$9 thousand of accounts receivable past due to be uncollectable and as such recorded an expense in the statement of loss for these amounts (\$1 thousand recovery in 2014).

As at December 31, 2015, 96 per cent of Gear's accounts receivable was current (2014 – 100 per cent) and 4 per cent was greater than 90 days (2014 – 0 per cent) with all amounts deemed to be collectible.

## 16. CAPITAL MANAGEMENT

Gear's capital management objective is to maintain a structure that will allow it to:

- Fund its development and exploration program;
- Provide financial flexibility to execute on strategic opportunities;
- Weather periods of low commodity prices in light of changes in economic conditions.

Gear considers its capital structure to include shareholders' equity and net debt, which includes debt, debentures, and working capital. As at December 31, these amounts are as follows:

(\$ thousands)	December 31, 2015	December 31, 2014
Debt	55,725	98,900
Debentures (at face value)	14,800	-
Accounts payable and accrued liabilities	6,860	23,687
Accounts receivable, prepaid expenses, and inventory	(11,413)	(24,183)
Net debt obligations <sup>(1)</sup>	65,972	98,404
Shareholders' equity	94,160	178,017
Total capital	160,132	276,421

(1) Net debt obligations exclude current unrealized amounts pertaining to risk management contracts and unamortized portion of debenture issuance costs

Gear's objective is to limit net debt at two times cash flow from operating activities excluding settlement of decommissioning liabilities and changes in non-cash working capital. At certain times, this ratio may be exceeded as a result of strategic acquisitions or low commodity prices. Gear manages its capital structure and makes adjustments to it in response to changes in economic conditions and the risk characteristics of its underlying assets. This is achieved by issuing new shares or adjusting its net debt position through the management of capital expenditures. For 2015, Gear's net debt to cash flow from operating activities excluding settlement of decommissioning liabilities and changes in non-cash working capital is 1.7 (2014 - 1.3).

In addition to internal capital management, Gear's Credit Facilities contains a financial covenant to maintain an adjusted working capital ratio of not less than 1.0:1 as outlined in Note 9. As at December 31, 2015, Gear was in compliance with this financial covenant.

There has been no change in Gear's capital management objectives during the year ended December 31, 2015.

## 17. SUPPLEMENTAL DISCLOSURES CASH FLOW INFORMATION

### Cash Flow Statement Presentation

The following table provides a detailed breakdown of the changes in non-cash working capital within cash flow from operating activities:

(\$ thousands)	Year ended December 31, 2015	Year ended December 31, 2014
Accounts receivable	9,414	(5,745)
Prepaid expenses	(23)	167
Inventory	2,709	(2,292)
Accounts payable and accrued liabilities	(16,827)	4,915
Total	(4,727)	(2,955)
Operating Activities	2,720	(7,486)
Investing Activities	(7,447)	4,531
Total	(4,727)	(2,955)

## 18. COMMITMENTS AND CONTINGENCIES

Following are summaries of Gear's contractual obligations and commitments as at December 31, 2015:

(\$ thousands)	Payments due by period 2016
Office leases <sup>(1)</sup>	195
Purchase commitments	10,224
Total contractual obligations	10,419

(1) Excludes estimate of occupancy costs.

Gear enters into commitments for capital expenditures in advance of the expenditures being made. At a given point in time, it is estimated that Gear has committed to capital expenditures equal to approximately one quarter of its capital budget by means of giving the necessary authorizations to incur the expenditures in a future period.

Gear is involved in litigation and claims arising in the normal course of operations. Management is of the opinion that pending litigation will not have a material impact on Gear's financial position or results of operations.

## 19. RELATED PARTY TRANSACTIONS

### Key Management Personnel Compensation

Gear has determined that the key management personnel of the Company consists of its officers and directors. In addition to the salaries paid to officers, Gear also provides compensation through participation in Gear's stock option plan. The compensation included in general and administrative expenses relating to key management personnel for the year was \$1.2 million (2014 - \$1.9 million).
