POSITION SUMMARY

Gear Energy is a publicly traded oil and gas E&P company with heavy oil exposure in East Central Alberta and West Central Saskatchewan, and light oil exposure in Central Alberta and now SE Saskatchewan. Current production is approximately 7,000 boe/d, and will be approximately 8,000 boe/d upon close of the latest acquisition.

Our strategy for success includes organic growth for which we currently hold a multi-year inventory of low-risk prospects, enhanced recovery projects, opportunistic acquisitions, and a calculated approach to exploration. Decision making at Gear is value based, analytical, and collaborative. Gear currently has 27 professional and technical staff in its Calgary head office. We have ambitious growth plans, and are seeking an outstanding individual to join the team.

We are currently seeking an individual with significant light tight oil exploitation weighted experience spanning varied projects to add to our South East Saskatchewan light oil team. The position reports to the Vice President, Operations.

This role will provide pro-active operations engineering and leadership within the South East Saskatchewan light oil asset team based on the individual's unique capabilities. The role is responsible for the following :

- Provide production, completion and facilities engineering support to the area team for exploration and development activities.
- Provide production optimization enhancement for area wells and pumping systems.
- Provide ongoing support and guidance to field staff.
- Propose and implement operating cost reduction initiatives.
- Track and maintain Saskatchewan Government compliance requirements.
- Provide due diligence support for area A&D activities.
- Demonstrate a high level of business acumen, creativity and strategic leadership within a multi-disciplinary team to support the continued success of the corporation.

QUALIFICATIONS:

- A minimum of 8 years of technical industry experience with a demonstrated history of adding value, including experience successfully developing tight oil assets in South East Saskatchewan.
- Experience with tight oil plays and multi-stage horizontal fracturing.
- Oversee all day to day workover servicing and programming.
- Demonstrated motivation, strong communication, and analytical skills with the ability to bring informal leadership to a multi-disciplined team.
- Strong organizational and time management skills.
- Experience in dealing with gas conservation projects and design.
