Position Summary

Gear Energy is a publicly traded E&P company with heavy and medium oil assets in East Central Alberta as well as light oil properties in Central Alberta and Southeast Saskatchewan. We are currently ~5,800 boe/d, well positioned for a range of opportunities to grow our company and continue to support our strong dividend. Our strategy for success includes organic growth for which we currently hold a multi-year inventory of prospects as well as employing a calculated approach to new oil play exploration and acquisitions. Decision-making at Gear is value based, analytical, and collaborative. Please see the corporate presentation on the Gear Energy website for additional details.

We are currently seeking an individual with significant light oil operations weighted experience spanning varied projects to add to our Central Alberta and South East Saskatchewan light oil team. The position reports to the Vice President, Operations. This role will provide pro-active operations engineering and leadership within the South East Saskatchewan light oil asset team based on the individual's unique capabilities.

Responsibilities

- Provide production, completion and facilities engineering support to the area team for exploration and development activities.
- Provide production optimization enhancement for area wells and pumping systems.
- Provide ongoing support and guidance to field staff.
- Propose and implement operating cost reduction initiatives.
- Track and maintain Alberta and Saskatchewan Government compliance requirements.
- Provide due diligence support for area A&D activities.
- Demonstrate a high level of business acumen, creativity and strategic leadership within a multi-disciplinary team to support the continued success of the corporation.

Qualifications

- A minimum of 8 years of technical industry experience with a demonstrated history of adding value.
- Experience with tight oil plays and multi-stage horizontal fracturing.
- Oversee all day-to-day workover servicing and programming.
- Demonstrated motivation, strong communication, and analytical skills with the ability to bring informal leadership to a multi-disciplined team.
- Strong organizational and time management skills.
- Experience in dealing with gas conservation projects and design.

Applications are being accepted until **October 2, 2024** and can be submitted to info@gearenergy.com.
Thank you for your interest in Gear Energy – only successful candidates will be contacted.
